

SwanCore Staking Services – Risk & Information Overview

SwanCore provides staking services designed to help users participate in blockchain networks while earning rewards.

While staking offers opportunities, users should understand the associated mechanisms.

Staking Rewards are calculated based on a Variable Reward Rate and each user's amount of Staked Assets.

This rate may change over time depending on network conditions and platform parameters.

Redemptions of staked assets may require processing time depending on blockchain network conditions.

Users may experience delays due to network congestion or high demand.

Cryptocurrency markets are dynamic, and asset values may fluctuate. Users should make informed decisions

and consider market conditions before participating.

SwanCore continuously works to maintain a secure and reliable platform environment.

However, blockchain systems may experience unexpected disruptions or delays beyond platform control.

Advanced Earn Products such as Dual Investment and Discount Buy provide structured opportunities with defined parameters.

These products may involve higher variability and require user understanding before participation.

Trading tools and automated strategies are provided to enhance user experience.

Users remain responsible for their chosen strategies and configurations.

On-chain services interact with decentralized protocols. While SwanCore selects reliable integrations,

users should remain aware of general blockchain risks.

Conclusion:

SwanCore aims to provide transparent, innovative, and secure financial tools.

Users are encouraged to review all product details and make decisions aligned with their financial goals.
